

THE GULFSTAR STORY

Since its founding in 1970, Gulfstar has become one of the world's leading builders of fiberglass sailboats, motor sailers and trawler yachts. The company has assembled a staff of the most experienced craftsmen available with an aggregate background of hundreds of years in marine construction. Specialists in the laying of fiberglass hulls, the fabrication of aluminum spars, teak carpentry and marine mechanical-electrical systems work together to perfect the advanced production techniques that make the remarkable Gulfstar price tags possible.

Located in St. Petersburg, Florida, a hub of contemporary fiberglass yacht manufacturing, Gulfstar has two plants totalling 130,000 square feet and a separate waterfront commissioning facility.

The company and its personnel are dedicated to the continuing production of the finest quality fiberglass yachts possible—in the highest Gulfstar tradition.
